### **DETAILED ACTION**

1. Applicant's arguments, filed 9 May 2006, with respect to the rejection(s) of claim(s) 1 under 103a have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Ghitza. The finality of the previous rejection is withdrawn.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ghitza et al. (Hereinafter "Ghitza") (US Patent 6,609,092).

Ghitza discloses a method of evaluating sound quality on an apparatus, comprising the steps of: collecting a sound caused from image forming apparatus at a location apart a certain distance from said apparatus (Fig. 1, source 110); measuring a psychoacoustic parameter of the collected sound (objective measurement 116); deriving a subjective evaluation value from the collected sound through a subjective evaluation (subjective test 112); subjecting said measured psychoacoustic parameter and the subjective value to a multiple regression analysis (regression analysis 118); computing a sound quality evaluative equation for assuming a subjective evaluation value (Col. 3,

Art Unit: 2615

lines 1-6), based on a result from the multiple regression analysis, using said psychoacoustic parameter; and computing a proper range of the subjective evaluation value assumed by the sound quality evaluative equation in said apparatus (output of 128). Although Ghitza discloses the use of regression analysis, Ghitza does not disclose the apparatus being an image forming apparatus or the regression being multiple regression. However, it is notoriously well known as a principal of mathematical analysis that multiple regression will provide a more accurate result than a single regression analysis. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use multiple regression to analyze sound from an apparatus by increasing the parameters to provide a more accurate evaluation.
